

Get the feeling of real comfort and performance

Even the best four wheel drives can be improved in comfort and ride.

That's because factory suspension is set up to give an average performance over a range of differing conditions. But who wants to settle for average.

Bouncing around off road, may be okay the first time out. But it won't be long before the fun wears out and your body starts to ache.

Eventually highway travel just becomes a long distance chore.

Fit a Suparide purpose-built suspension system. It smoothes out highways, and gives a vastly superior ride off road.

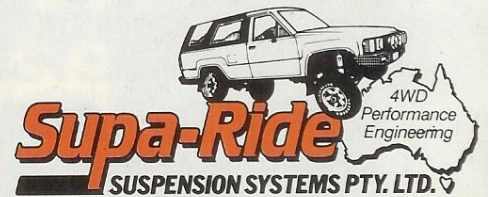

A Suparide system raises the vehicle reducing rear end sag. With reduced body roll and no pitching you get a more positive, in control feel, in all situations.

Towing your boat, camper or caravan, Suparide makes getting there an easier and more relaxing task.

Suparide gives all this in a real performance custom-built system, that costs around the same as an ordinary off the shelf suspension pack.

But you don't have to take our word for it. Come out and take an obligation free test drive in one of our Suparide improved vehicles. We're sure that once you get the feeling you'll have to have a Suparide system for your four wheel drive.
